**Art Rejections:**

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kinnunen et al, U.S. pat. No. 6,813,501.

Per claims 1, 4 and 9, Kinnunen discloses a method of determining resources accessible to client nodes comprising:

a) receiving information at a server node via a communications medium, said communications medium usable in accessing data at the server node (see col 8, lines 62-67); and

Art Unit: 2154

b) using said information to determine one or more resources of a plurality of resources of said server node assigned to a client node (see col 9, lines 21-49).

Per claims 2-3, Kinnunen teaches determining by the server node whether the information was received via a trusted source/agent and storing information at the server node (see col 9, lines 1-11).

Per claims 5-6, Kinnunen teaches using user ID to identify a user (col 7, lines 57-63) wherein the ID can be used an index to locate user profile (col 9, lines 12-20).

Per claim 7, Kinnunen teaches using a trusted agent to authenticate the client node, e.g., providing ID or security key (see col 9, line 53 - col 10, line 3).

Per claims 8 and 10, it is noted that the server and client can be on the same or different partition of network nodes (see col 5, lines 23-48).
